# 🎧 Deepfake Audio Detector

Detect AI-generated voices using CNN + Mel Spectrogram
analysis.

## How It Works
1. Upload any audio file (WAV, MP3, M4A)
2. Model extracts 128-band Mel Spectrogram features
3. 3-block CNN classifies as Real or Fake

## Architecture
- 3x Conv blocks with BatchNorm + Dropout
- Global Average Pooling

```

- Binary classifier head

Dataset

- Real: LJSpeech dataset
- Fake: gTTS + espeak + edge-tts

Limitations

- Trained on limited TTS engines
- Upgrade path: ASVspoof 2019 + ElevenLabs fakes

Built By

AI/ML Intern Portfolio Project
